CONTENTS

From homotopy links to stratified homotopy theories **1**
Sylvain Douteau & Lukas Waas

1. Introduction 5

2. Preliminaries 13
2.1. Partially ordered sets 13
2.2. Stratified spaces 15
2.3. Stratified simplicial sets 18
2.4. Classical links and homotopy links 21
2.5. Generalized links and homotopy links 23
2.6. Homotopy links and diagrams 26
2.7. The model category of diagrams 27
2.8. Model categories for stratified spaces 29
2.9. The model category of stratified simplicial sets 32
2.10. Failure to be a Quillen equivalence 34
2.11. The stratified subdivision and its adjoint 35
2.12. Recovering a Quillen equivalence 37

3. Ex_P and Sing_P characterize weak equivalences 39
3.1. Fibrant replacement a la Kan, in sSet_P 39
3.2. Sing_P characterizes weak equivalences 45

4. Realizations characterize weak-equivalences 47
4.1. Comparing the simplicial links and the geometric links 47
4.2. From links to homotopy links 48
4.3. $|-|_{N(P)}$ preserves weak equivalences 50
4.4. Comparing homotopy links in $\mathrm{Top}_{N(P)}$ and Top_P 52
4.5. Realizations characterize weak-equivalences 61

5. Equivalence of homotopy categories and applications 63
5.1. Equivalence between homotopy theories 63
5.2. Embedding the classical stratified homotopy category 65
5.3. A simplicial approximation theorem 68

6. Simplicial Homotopy links and vertically stratified complexes 71
6.1. Sketch of proof of Theorem 6.1 72

6.2. Vertically stratified objects 76
6.3. One last approximation theorem 83
Acknowledgements 90

A. Incompatible criteria for model structures over Top_P 91

B. Relating labelings, vertical stratifications and diagrams 97

Bibliography 103

Fluid dynamic limit of Boltzmann equation for granular hard-spheres in a nearly elastic regime **107**
Ricardo Alonso, Bertrand Lods & Isabelle Tristani

1. Introduction 113
1.1. Multiscale descriptions of granular gazes 113
1.2. The Boltzmann equation for granular gazes 115
1.3. Navier-Stokes scaling 118
1.4. Self-similar variable and homogeneous cooling state 118
1.5. Main results 121
1.6. Hydrodynamic limits in the elastic case 125
1.7. The challenge of hydrodynamic limits for granular gazes 127
1.8. Notations and definitions 128
1.9. Strategy of the proof 129
1.10. Organization of the paper 134

2. Summary of useful results about the collision operator 137
2.1. Strong and weak forms of inelastic Boltzmann collision operators 137
2.2. Decomposition of $\mathscr{L}_\alpha$ 151
2.3. The complete inelastic linearized operator 152

3. Hypocoercive norm for the elastic problem 155

4. Nonlinear analysis 167
4.1. Splitting of the equation 168
4.2. Estimating h^0 169
4.3. Estimating $\mathbf{P}_0 h^1$ 171
4.4. Estimating the complement $(\mathbf{Id} - \mathbf{P}_0)h^1$ 176
4.5. Final a priori estimates 180

5. Cauchy Theory 185
5.1. Iteration scheme 186
5.2. Estimating $\|h^0_{n+1} - h^0_n\|_{\mathcal{E}}$ and $\|h^1_{n+1} - h^1_n\|_{\mathcal{H}}$ 188
5.3. Convergence of the iteration scheme 195

6. Hydrodynamic limit 197
6.1. Compactness and convergence 198
6.2. Incompressibility condition and Boussinesq relation 201
6.3. Local conservation laws 203
6.4. About the equations of motion and temperature 205
6.5. About the initial conditions 214
6.6. Limit equations 215

7. About the original problem in the physical variables 217

A. Tools for the Hydrodynamic limit 221

B. Estimates on the collision operator 231

Bibliography 235
